Stock Market Data for Analysis

// Import required libraries

import yfinance as yf

import pandas as pd

import matplotlib.pyplot as plt

tickers = ["HDFCBANK.NS", "ICICIBANK.NS", "KOTAKBANK.NS"]

data = yf.download(tickers, start="2024-01-01", end="2024-12-30",  
group\_by='ticker')

print(data.head())

HDFC\_data = data['HDFCBANK.NS']

print(HDFC\_data.describe())

HDFC\_data['Daily Return'] = HDFC\_data['close'].pct\_change()

plt.figure(figsize=(12,6))

plt.subplot(2,1,1)

HDFC\_data['close'].plot(title="HDFC closing price")

plt.subplot(2,1,2)

HDFC\_data['Daily Return'].plot(title="HDFC Daily Returns", color='orange')

plt.tight\_layout()

plt.show()

HDFC\_data.to\_csv('HDFC-stock-data.csv')

```
ICICI_data = data['ICICIBANK.NS']
```

```
ICICI_data['Daily Return'] = ICICI_data['close'] - pct_change
```

```
plt.figure(figsize=(12,6))
```

```
ICICI_data['close'].plot(title="ICICI - closing price")
```

```
ICICI_data['Daily Return'].plot(title="ICICI - Daily Returns", color='orange')
```

```
plt.show()
```

```
KOTAK_data = data['KOTAKBANK.NS']
```

```
KOTAK_data['Daily Return'] = KOTAK_data['close'] - pct_change
```

```
plt.figure(figsize=(12,6))
```

```
KOTAK_data['close'].plot(title="KOTAK - closing price")
```

```
KOTAK_data['Daily Return'].plot(title="KOTAK - Daily Returns", color='orange')
```

```
plt.show()
```

## Q Importing and Exporting data

Method 1: Initializing values directly into DataFrame

Import pandas as pd

```
data = {
```

```
    'ID' = ['IBN22C001', 'IBN22C002', 'IBN22C003', 'IBN22C004', 'IBN22C005']
```

```
    'Name' = ['A', 'B', 'C', 'D', 'E'],
```

```
    'Marks' = [96, 97, 98, 98, 99]
```

```
}
```

```
df = pd.DataFrame(data)
```

```
print(df.head())
```

Method 2: Importing datasets from sklearn-datasets

```
import pandas as pd
from sklearn.datasets import load_diabetes
diabetes = pd.DataFrame(diabetes.data, columns=diabetes.feature_names)
df['target'] = diabetes.target
print(df.head())
```

Method 3: Importing datasets from specific .csv file

```
import pandas as pd
file-path = 'sampledata.csv'
df = pd.read_csv(file-path)
print(df.head())
```

Method 4: Downloading datasets from existing dataset repositories like Kaggle, UCI, Mendely, KEEL etc

1. Download diabetes datasets from mendely

```
df = pd.read_csv('diabetes.csv')
print(df.head())
```

lab1:

(i) `df=pd.read_csv("housing.csv")`

(ii) `df.info()`

(iii) `print(df.describe())`

(iv) `print(df["ocean-proximity"].value_counts())`

(v) `missing-values = df.isnull().sum()`

`columns-with-missing-values = missing-values[missing-values > 0]`

`print(columns-with-missing-values)`
